

japanese 90s mecha arch rice

moodboard / notes

core concept

equipment-grade control panel. an interface that reads as an **instrument**, not a themed desktop. labelled modules, boxed UI, corner brackets, mono system text, one deep-purple active state. hazard colours only for real warnings.

design rules

- one motif per component
- waybar module names uppercase & 5 chars max
- amber / red / green for status only
- purple = selected / active
- labels over icons
- every interaction point should feel purposeful

palette

■ bg #080b0f ■ surface #0f141c ■ surface hover #212731 ■ border #35404c ■ border active #505d6d
■ text #e7ecf2 ■ muted text #8e9aaa ■ accent #3d177f ■ selection #1c1430 ■ warn #e0a12e
■ error #a31621 ■ success #167a52

typography

plex sans for UI + body, plex mono for labels + values. no font mixing except label + value.

- label: mono 500, 12px, uppercase, 0.08em
- value: mono 400, 13px
- body: sans 400, 14px
- title: sans 500, 16px
- sentence case bodies, title case titles

system components

- waybar — single strip, compact modules, workspaces 00-10, hostname
- notis — 360px cards, 4px severity bar, top-right
- rofi launcher — centred, 480px, mono footer legend
- windows — fixed gaps, snappy motion, no blur/shadows
- terminal — kitty, muted ANSI, purple selection

look / feel

dark throughout. wallpapers: low-detail gradients, blurred macro shots, industrial textures — nothing busy or high-contrast. transparency only on launcher + notis. no animations beyond short snappy ones.
